

Sustainability in practice
right around the world

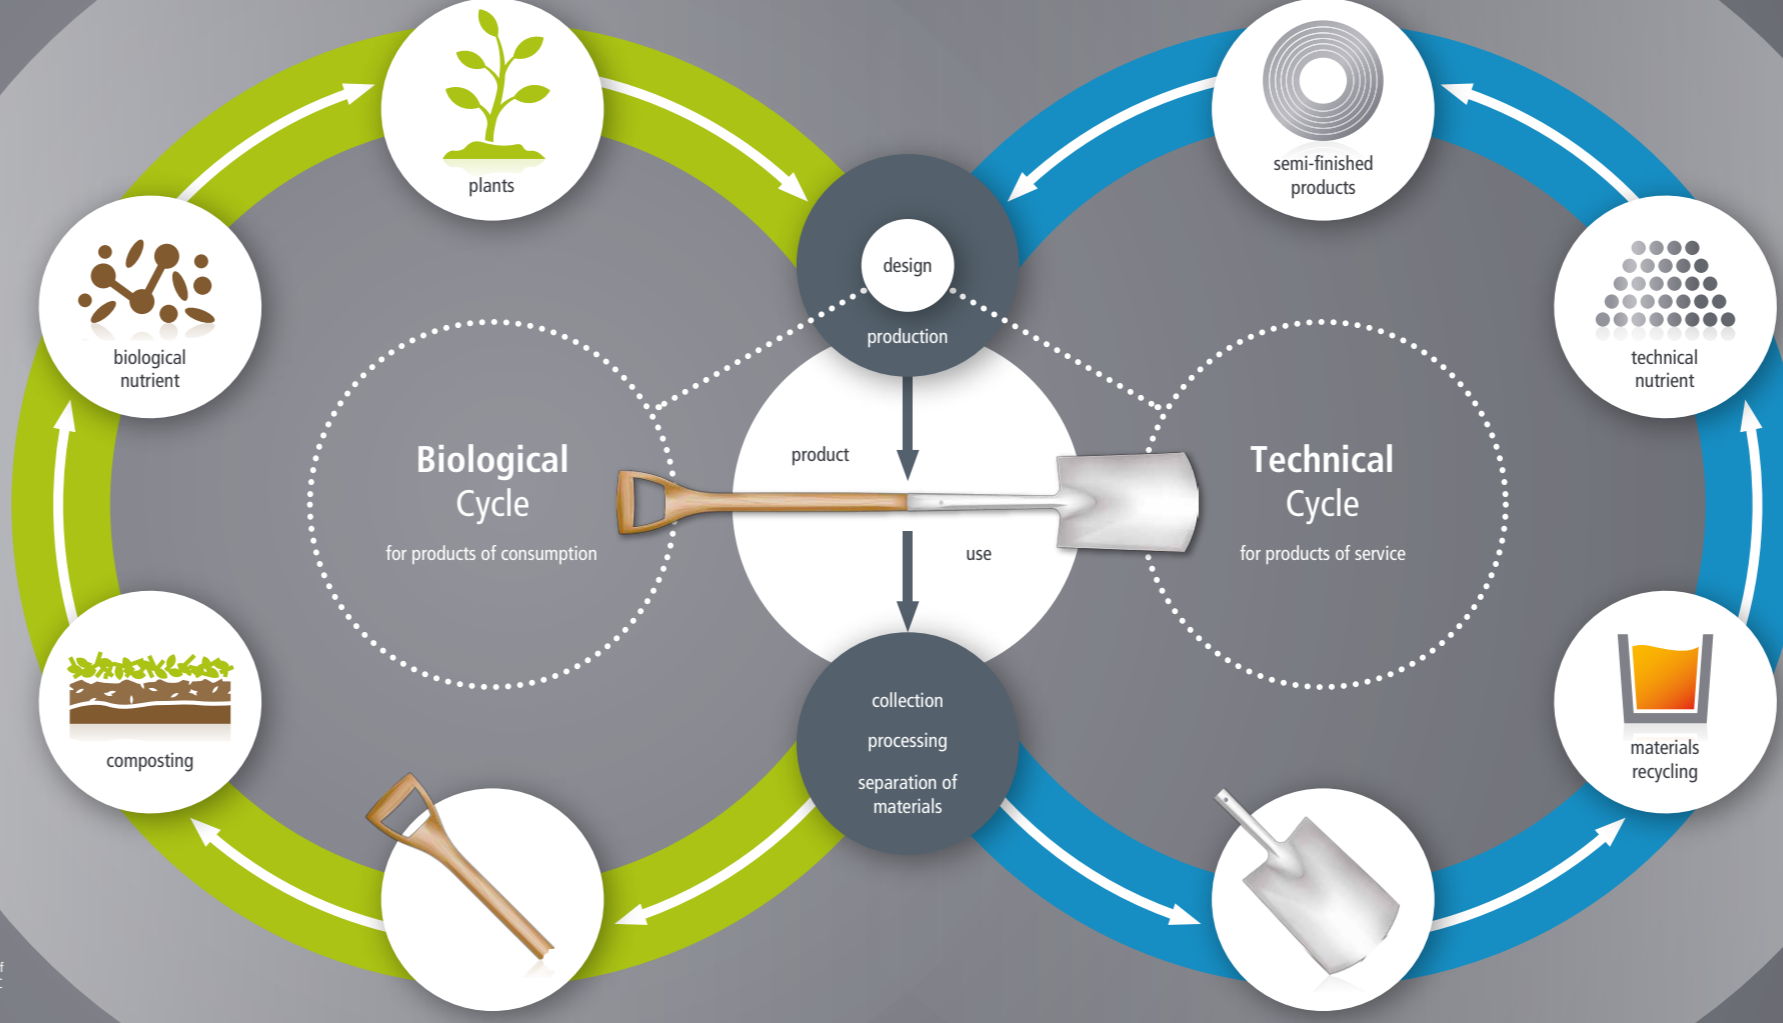

remondis-sustainability.com

German Sustainability Award:
REMONDIS was named one
of the Top 3 most sustainable
large corporations in 2012,
2014 and 2015

We are one of the world's leading recycling, service and water compa-
nies which means that the work we do today is focused on the world of
tomorrow – by developing innovative technologies, recovering valuable
raw materials and meeting the highest environmental, economic and
social standards. At around 800 national and international business loca-
tions, find out more at < a href="http://remondis-sustainability.com" >remondis-sustainability.com

Working for the future – a promise
and business mission all in one

Cradle to Cradle® is a registered trademark of
McDonough Braungart Design Chemistry, LLC

Sustainability thought through to
the end: Cradle to Cradle®

Exploring new avenues to drive forward recycling – this is another of
REMONDIS' strengths. Which is why we support the Cradle to Cradle®
design concept which calls for products to be manufactured in such a
way that all their components can be processed and/or recycled without
any loss in quality.

REMONDIS is one of the world's largest
recycling, service and water companies.
The company group has branches and
associated businesses in 33 countries
across Europe, Africa, Asia and Australia.
With over 32,000 employees, the group
serves around 30 million people as well
as many thousands of companies. The
highest levels of quality. Working for
the future.

ACTING

"Recycling rather than disposal". This is a
principle that we always follow – doing everything
in our power to close product life cycles in order to
conserve our planet's natural resources. With over
800 plants and facilities around the world, we handle
30 million tonnes of materials every single year, the
majority of which is recycled. From normal residual
waste to hazardous waste, from wastewater to
e-waste. By doing so, we produce valuable recycled
raw materials as well as environmentally friendly
energy – for example from biogas.

Recycling raw materials &
producing energy

Our all-encompassing view of sustainability also
includes us being sustainable ourselves. This covers
all aspects of our business – starting with the
energy efficiency levels of our head office buildings
and production plants, to running our business in a
moral, ethical and responsible manner, all the way
through to offering future-oriented professions.
One of our objectives is to ensure that all our staff
do work that is meaningful – no matter what their
qualifications or level of education may be.

Sustainability in our
everyday business life

LIVING

The great thing about sustainability is that it's
catching. Thanks to our innovations and dedication,
we are helping to make sure that the whole issue
of resource conservation is playing an ever growing
role in the world of business and, indeed, in society
as a whole. For example, by offering our clients
sustainability certificates, by entering into PPPs and
and private sectors with our technology and know-
how or by showing how existing recycling activities
could achieve even better results.

Paving the way &
offering added value

INSPIRING

Sustainable development begins with each individual
person and the way they think. We have, therefore,
initiated a whole range of measures to promote
sustainability in order to provide fresh impetus and
fulfill our social responsibilities – from an educational
programme for children and teenagers, to funding a
professorship. What's more, we play an active role
in many different associations to show that business
and environmental protection are compatible and to
further cement the role of sustainability in the econ-
omy as a whole.

Getting people
interested in what
really matters

FOSTERING

Nothing can have a greater global impact than finding
solutions to promote sustainability. Our company
can help create some of these solutions; others are
beyond our range of influence – despite our area of
expertise being resource conservation. Nevertheless,
we always do our very best to play a role in these
areas, too, so that we can at least contribute towards
the bigger picture. And even if it is us simply making
global sustainable development strategies – such as
the so-called sustainable development goals (SDGs) –
easier for everyone to understand.

Knowledge shared
is knowledge doubled

SHARING

Figures to be proud of – the input & output volumes at REMONDIS' Lippe Plant

Our plant in the German town of Lünen is both our company's head office and a centre of technology. Every year, 800,000 tonnes of recycled materials are produced from waste at this site alone – helping to cut carbon emissions by 466,000 tonnes.
